Type of Triangle ★

Write a query identifying the type of each record in the **TRIANGLES** table using its three side lengths. Output one of the following statements for each record in the table:

- **Equilateral**: It's a triangle with **3** sides of equal length.

- **Isosceles**: It's a triangle with **2** sides of equal length.

- **Scalene**: It's a triangle with **3** sides of differing lengths.

- **Not A Triangle**: The given values of A, B, and C don't form a triangle.

Input Format

The **TRIANGLES** table is described as follows:

Column	Type
A	Integer
B	Integer
C	Integer

Each row in the table denotes the lengths of each of a triangle's three sides.

Sample Input

A	B	C
20	20	23
20	20	20
20	21	22
13	14	30

Sample Output

```
Isosceles
Equilateral
Scalene
Not A Triangle
```

Explanation

Values in the tuple $(20, 20, 23)$ form an Isosceles triangle, because $A = B$.

Values in the tuple $(20, 20, 20)$ form an Equilateral triangle, because $A = B = C$. Values in the tuple $(20, 21, 22)$ form a Scalene triangle, because $A \neq B \neq C$.

Values in the tuple $(13, 14, 30)$ cannot form a triangle because the combined value of sides A and B is not larger than that of side C.
